Screenshots Download Link Secure VPN Pro v2.1.6 MOD APK (3.8 MB) | Mirror Were you looking for an application that would help you with a VPN proxy server? Signal Lab is offering a quick app to use for this purpose. This tool is called Secure VPN, and you should download it on your mobile device. We access the internet daily. This is the main reason why the importance of internet security and security cannot be overemphasized. Keeping your online activity private is equally important to ensure that third parties do not track. Secure VPN will help you encrypt your data as well as your connection. With Secure VPN, you can boast of having access to a global VPN network. This includes Europe, Asia and America. What is certain is that more countries will be added. It is important to note that these servers are readily available, and you can always switch from one to another. Why you should use this app You're probably wondering what there is special in this app, and why you should make use of it. Here are some of the reasons why Secure VPN should be on your device: Permissions are not required after you install the application No logging configuration is required, and many servers without time and and Limit Works well with 3G, 4G and other data loads Neat user interface This is the fastest application in the world for creating a secure virtual private network. The main things to know about vpn vpn vpn is short for virtual private network, and helps in extending the private network to the public network. This allows users to receive and send data over public or shared networks. It is important to note that everything will be as if they were connected to the public network. Therefore, when you use VPN in your phone apps, you will enjoy different security and functionality. It's worth noting that your connection can't be completely anonymous with a VPN. What it does is increase the level of security and privacy of your connection. Secure VPN will help ensure that your private information is not disclosed. It would only allow authenticated remote access using encryption techniques and tunneling protocols. Download Secure VPN on your device now. Download Secure VPN Apk Free for Android Download the latest version of Secure VPN on your device. App Information Download APK [2.1.6][3.77 MB] Download APK Mod[1.1.10][4.02 MB] Secure VPN is a fast and fast app that provides a free VPN proxy service. You don't need any configuration, just click a button, you can access the Internet securely and anonymously. When it comes to Internet security and security, Secure VPN is an essential tool. It encrypts your connection so that third parties can't track your online activity, making it more secure than a typical proxy. We built a global VPN network that included America, Europe and Asia, and expanded to more countries soon. Most servers are free to use, you can click the flag and change the server as you like. Why choose Secure VPN? ✓ Large number of servers, high-speed bandwidth ✓ Choose apps that use VPN (Android 5.0+ required) ✓ Works with Wi-Fi, LTE/4G, 3G and all mobile data operators ✓ Strict non-registration policy ✓ Smart server smart choice ✓ Well designed UI, some ADs ✓ No use and time limit ✓ No registration or configuration required ✓ No additional permissions The Secure VPN recharge, the fastest and safest virtual private network in the world, and enjoy it all! If Secure VPN connect failed, don't worry, you can follow these steps to fix it: 1) Click the flag icon 2) Click the update button to check servers 3) Choose the fastest and most stable server to reconnect the suggestion and good rating to keep it growing and make it better :) Private virtual introduction (VPN) extends a private private network on public network, and allows users to send and receive data on shared or public networks as if their computing devices were directly connected to the private network. Applications running across the VPN can therefore benefit from the functionality, security, and management of the private network. Individual Internet users can secure their transactions with a VPN, to bypass georestrictions and censorship, or to connect to proxy servers to protect personal identity and location. However, some Internet sites block access to the well-known VPN technology to prevent circumvention of their geographical restrictions. VPNs may not make online connections completely anonymous, but they can often increase privacy and security. To prevent the disclosure of private information, VPNs typically allow only authenticated remote access using tunneling protocols and encryption techniques. Mobile virtual private networks are used in configurations where a VPN endpoint is not pinned to a single IP address, but instead roams over multiple networks, such as cellular carrier data networks or between multiple Wi-Fi access points. Mobile VPNs have been widely used in public safety, where they give police officers access to mission-critical applications such as computer-assisted dispatch and criminal databases while traveling between different subnets of a mobile network. Internet Allows you to access the internet network. The state of the access network allows you to access information about networks. Wake Lock Allows the use of PowerManager WakeLocks to prevent the processor from sleeping or the screen from darkening. Killing background processes allows you to terminate the background process. Access wi-fi status Allows you to access information about Wi-Fi networks. com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE permission of the App client. com.google.android.c2dm.permission.RECEIVE Permission from the app's client. com.fast.free.unlock.secure.vpn.permission.C2D_MESSAGE permission of the App client. com.android.vending.BILLING App customer permission.
